WOOD FROM SUSTAINABLE MANAGED FORESTRY

We are committed to increasing the share of sustainable raw wooden material in our products and thereby support responsibly managed forests – for a better world.

Governments and local authorities are specifying the supply of legal and responsibly sourced wood in their procurement policies.

We have invested in a Chain-of-Custody Multi-site certificate (FSC-C144988), issued by FSC, which documents, that we can offer wood from responsibly managed forests. FSC® (Forest Stewardship Council) is an international labelling scheme, that documents that FSC labelled products originate from sustainable forestry.

Working with certified suppliers, we can now offer all painted and veneered components as fully FSC Mix certified (noted in this document at the top of each page showing wooden components).

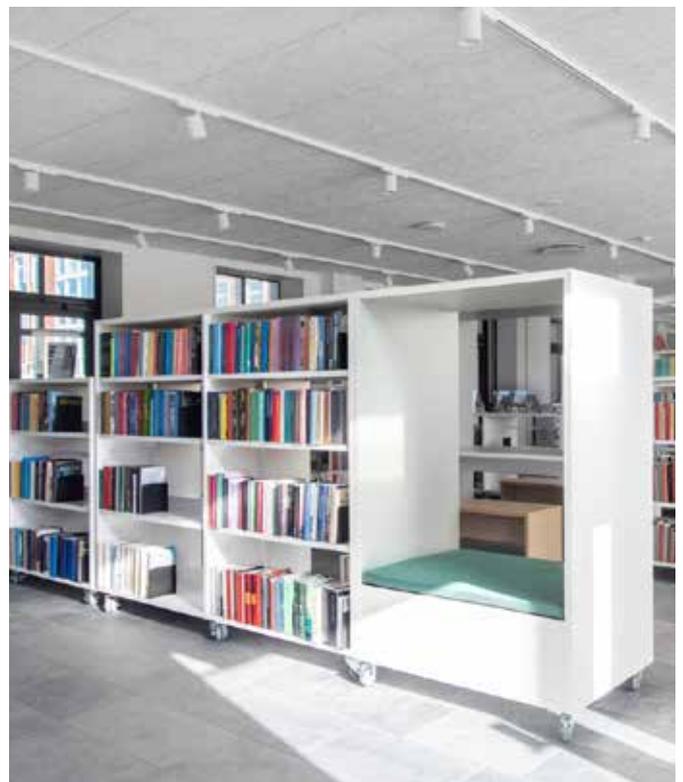

What is sustainable managed forestry?

According to the FSC, forests, managed according to their principles and criteria, mean fair conditions for workers, respect for indigenous communities and local populations as well as strict environmental controls.

The FSC label guarantees that the trees that are harvested are replaced or allowed to regenerate naturally.

The FSC label also guarantees that all the wood is tracked from the forest to the store. Every link between the forest and the consumer is certified to make it clearly identifiable which wood is from sustainable forestry and which is not.

GENERAL SPECIFICATIONS

BAYS WITH ADJUSTABLE FEET AND TOP SHELVES

They are available as freestanding and intermediate bays.

BAYS WITH ADJUSTABLE FEET AND OVERLAYING TOP PLATES

They are available as starter, intermediate and end sections. You can combine 18°, 26° and straight bays to create the desired complete shelving. For maximum number of combined straight and curved bays that can be constructed in a continuous shelving system, see page xx. The adjustable feet can be adjusted even when the bays are loaded.

BAYS WITH CASTORS

Castors may only be fitted with double-sided bays which do not exceed a maximum height of 1520 mm and a maximum of 3 adjoining bays. Bays on castors are not to be used for transportation. The castors are only fitted in order to move the shelving system around, see instruction below. Crossing doorsteps can be dangerous. After moving the shelving you must lock the brakes. Shelving systems generally have to be moved and placed on a flat, level and horizontal floor.

There is a risk of getting hurt if the shelving system is moved incorrectly. Therefore, the following rules of conduct must be followed:

- It must be ensured that no items can fall off the shelves while moving. If in doubt, then remove items before moving.
- Use a maximum of two people to move the shelving system.
- Make sure to move the shelving system in a smooth movement, avoid jerky movements.
- Only move the shelving system at the ends, do not stand at the long sides of the shelving system during the move.
- To avoid injuries, you must ensure that you always have enough space to the surrounding walls and other furniture.
- If more than one person is involved, be sure to coordinate direction and intention, before actually moving the shelving system.
- Ensure that you only move the shelving system on a flat, level floor with no incline. The floor must be free of any items. Even small parts may cause a sudden blockage of a castor. In this case, the shelving system could tip or damage the floor.
- Before moving, unlock the wheel brakes.
- After moving, lock the wheel brakes.

WEIGHT ON BAYS WITH CASTORS

Visible castors on castor frame are available with and without brakes. We recommend installing at least 2 castors with brakes for one or more adjoining bays. Max. load of 100 kg per visible castor/400 kg per bay.

Hidden castors on castor frame are delivered without brakes, so when shelving is positioned in place, you must adjust the adjustable feet. Max. load of 100 kg per hidden castor/400 kg per bay.

Bays with castor plates are mounted with either 4, 6 or 8 castors, 2 of which are with brakes. Max. load of 200 kg per bay.

BAYS WITH SHELVES

Bays with back panel/back frame: Each bay must have at least 2 shelves (4 shelves for double-sided bays) - top and bottom - screwed into the panels for stability. The remaining shelves can be inserted without screws.

Bays with cross brace: Each bay above H1220 mm must have at least 3 shelves (6 shelves for double-sided bays) - top, middle and bottom - screwed into the panels for stability.

STABILITY

End panels are provided with adjustable feet, except for panels intended for use with castor plates. Single-sided panels are supplied with wall securement and must be fixed to the wall.

ROUNDED EDGES

All storage units and brackets have rounded edges.

DENSITY

Particle board has a density of 600-700 kg/m³

Block board has a density of 602 kg/m³ (+/- 2 %)

MDF has a density of 700 kg/m³ (+/- 5-7 %)

BROWSERS

Shelvings can be fitted with browsers. Pulling out one or more browsers could cause the shelving to tip. Ensure that the shelving cannot tip by securing shelving. If in doubt, you must fix the shelving to the floor, wall or ceiling.

For safety reasons:

- It is not allowed to load browsers with more than 45 kg.
- Do not use the browsers as a step. The lowest browser must be installed at least 50 cm above the ground. This should ensure that the browser is not used as a step.
- Single-sided bays must be fixed to the wall. A maximum of 3 drawers per bay is allowed.
- Only 1 browser per side and bay is allowed on double-sided bays.
- Do not install pull-out browsers on shelving with castors.

ASSEMBLY

All wooden shelving units come knocked-down. Assembly guidelines can be found on our website.

BAY CONSTRUCTION

FREESTANDING AND INTERMEDIATE BAYS BBN001/BBN201/BBN221

A freestanding bay includes one right and one left end panel with holes on the inside of the panel. To add another bay, you must take off the right end panel, insert the intermediate bay (panel with holes on both sides) and fix the right end panel from the freestanding bay to the intermediate bay. See example below and configuration no. 5 on page 29.

OVERLAYING TOP PLATES FOR STRAIGHT BAYS WITH ADJUSTABLE FEET

A straight overlaying top plate has a maximum length of 2750 mm.

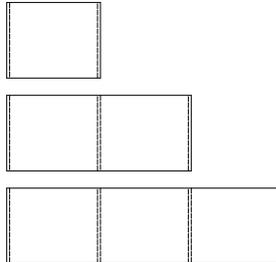

If you build a shelving system with 1, 2 or 3 bays, then you can use just one freestanding top plate (depending on module size).

If you build a shelving system with more than 3 bays, then the overlaying top plates will be a combination of outer and intermediate overlaying top plates.

Freestanding wooden top plate

Is always used for 1 bay and can be used for 1, 2 or 3 bays. The top plate covers the end panels in both ends.

BAY CONSTRUCTION

LEFT/RIGHT STARTER/END ROUND SECTIONS

When constructing a round Lingo shelving system with adjustable feet and top plate (BBN202/BBN222), you must look at the shelving from the inside of the curve to determine which section is needed in the complete shelving system. This means that you will have to change position to find the correct sections to design your final shelving system.

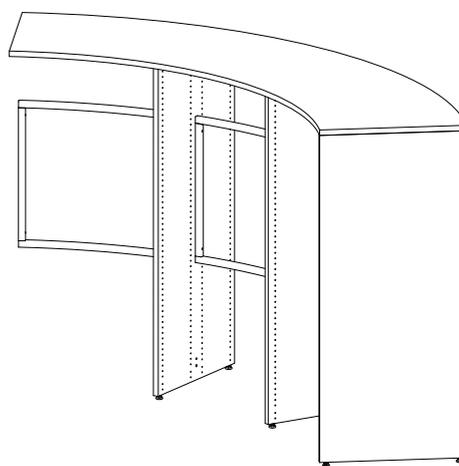

LEFT STARTER SECTION

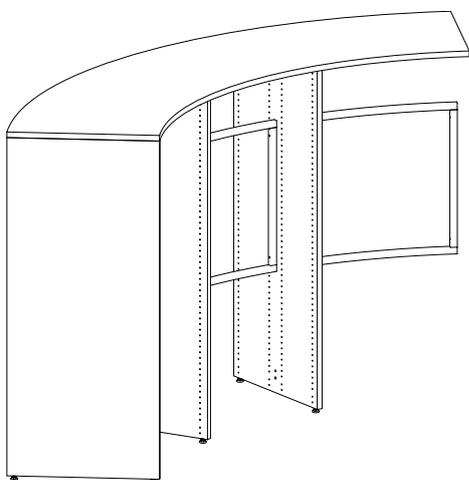

The left starter section starts with a left end panel and ends with an intermediate panel.

RIGHT STARTER SECTION

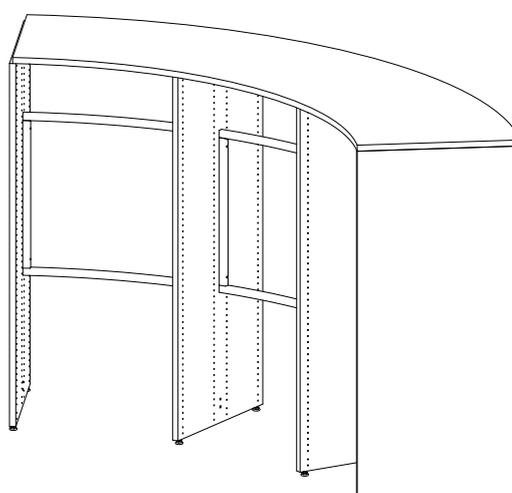

The right starter section starts with a right end panel and ends with an intermediate panel.

LEFT END SECTION

The left end section starts without an intermediate panel and ends with a left end panel.

RIGHT END SECTION

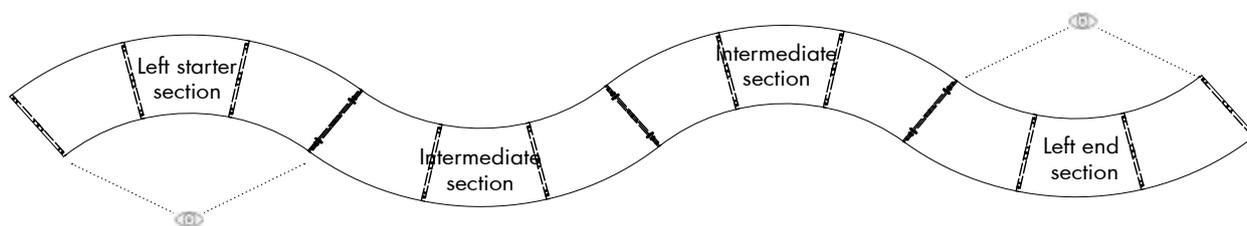

The right end section starts without an intermediate panel and ends with a right end panel.

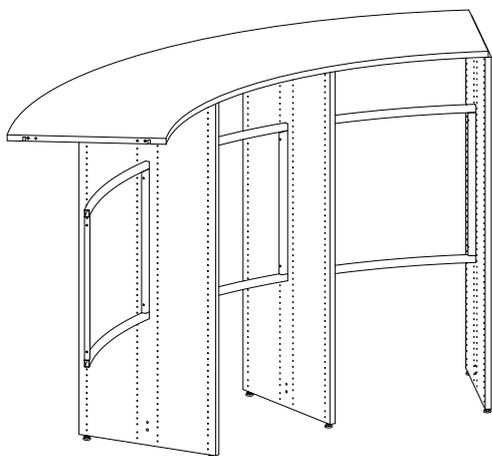

BAY CONSTRUCTION

INTERMEDIATE SECTIONS

When constructing a round Lingo shelving system with adjustable feet and top plate (BBN202/BBN222) over more than 3 bays, it will be necessary to have an intermediate section in between the starter and end sections.

INTERMEDIATE SECTION

An intermediate section starts without an intermediate panel and ends with an intermediate panel.

STRAIGHT AND ROUND COMBINATIONS

COMBINING STRAIGHT AND ROUND SHELVING

It is possible to combine round and straight shelving to create unique shelving - all depending on space available on location, shelving space required and design.

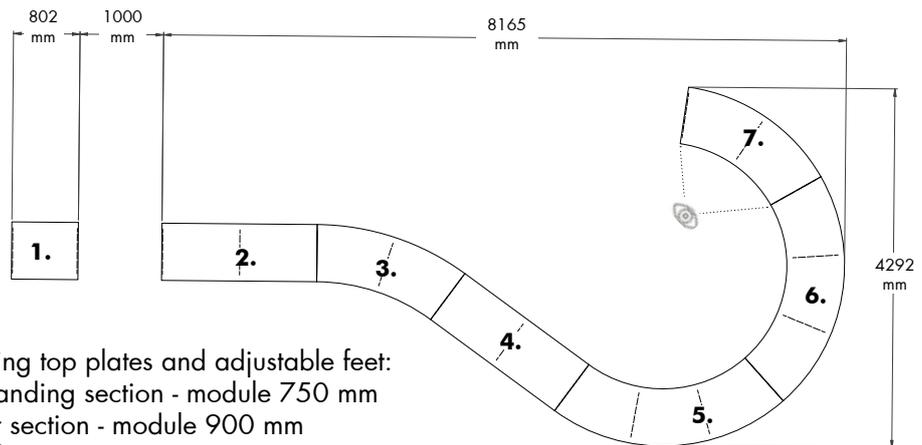

BAYS ON ADJUSTABLE FEET

There are restrictions to be considered when constructing round shelving, due to the angle of the complete number of bays. The overview shows the maximum number of bays that can be constructed in a continuous shelving system, before you must change the angle/direction of the shelving.

	Number of adjoining bays possible in freestanding section	Number of adjoining bays possible in left/right starter section	Number of adjoining bays possible in intermediate section	Number of adjoining bays possible in left/right end section
26°	Up to 12 bays	Total of 9 bays	7 bays	Total of 9 bays
18°	Up to 18 bays	Total of 13 bays	10 bays	Total of 13 bays
Straight	Up to 9 bays	Total of 9 bays	9 bays	Total of 9 bays

BAYS ON CASTOR PLATE

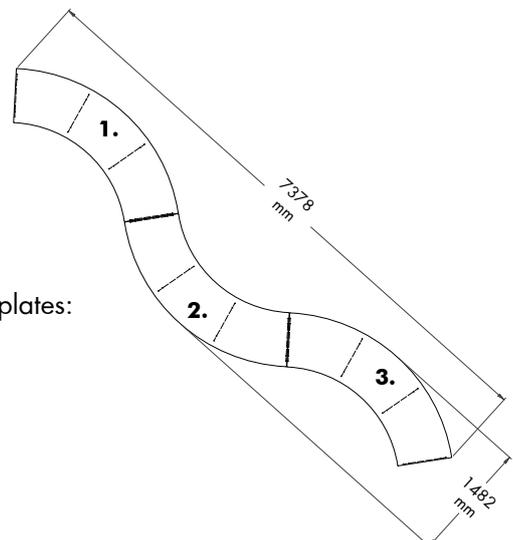

The overview above also applies to bays on castor plates, however castor plates are constructed in a maximum of 3 bays and not in a continuous shelving system.
